

We Claim As Our Invention:

1. A goods sales system which accepts a purchase order for ordered goods via a communication, and sends the ordered goods to a recipient with a predetermined method, comprising:

- 5 a predetermined box for storing the ordered goods;
a key information regarding medium in which key information indicating that the recipient is a rightful recipient of the ordered goods and has a right to use the predetermined box in which the ordered goods are stored is recorded;
a key information reading device for reading the key information with
10 regard to the predetermined box;
a box user information recording device for recording box user information containing the key information and information with regard to the predetermined box; and
a box open and close controlling device for checking the key
15 information with regard to the predetermined box, read by the key information reading device, and the key information stored in the box user information recording device so as to control open and close of the predetermined box in accordance with a result of the checking, wherein the goods receiving device is in a vicinity of an entrance of an arbitrary public transport.

20

2. A goods sales system which accepts a purchase order for ordered goods via a communication, and sends the ordered goods to a recipient with a predetermined method as claimed in claim 1, wherein the key information recording medium is also used as a prepaid-type ticket of the public transport.

25

3. A goods receiving device used in a system for delivering ordered goods to a recipient in a predetermined method, comprising:

- a predetermined box for storing the ordered goods;
a key information reading device for reading key information from a
30 key information recording medium in which the key information indicating that the

recipient has a right to use the predetermined box in which the ordered goods are stored is recorded;

5 a box user information recording device for recording box user information containing the key information and information with regard to the predetermined box; and

10 a box open and close controlling device for checking the key information with regard to the predetermined box, read by the key information reading device, and the key information stored in the box user information recording device so as to control open and close of the predetermined box in accordance with a result of the checking, wherein the goods receiving device is in a vicinity of an entrance of an arbitrary public transport.

4. A goods sales method in which a purchase order for ordered goods is accepted via a communication, and the ordered goods are sent to a recipient with a predetermined method, the method comprising the steps of:

15 recording key information indicating that the recipient of the ordered goods has a right to use a box in which the ordered goods are stored in a key information recording medium in advance;

20 storing the ordered goods in the box which the recipient has the right to use and which is provided in a goods receiving device placed in a vicinity of an entrance of an arbitrary public transport;

locking the box when the purchase order of goods is done via the communication; and

25 unlocking the box to open the box when the goods receiving device reads out the key information recorded in the key information recording medium and checks the key information with the key information with regard to the box recorded in the goods receiving device in advance to find that the information coincides.
